

ABSTRACT OF THE DISCLOSURE

A process of selecting a recording on an audiovisual reproduction system consists of displaying a number of windows on a touch screen as an interface with a user. Items of information are stored in a bulk memory and are representative of an image of the album cover that is associated with each window and whose corresponding musical recording is stored in the bulk memory of the reproduction system. Each zone of a window is associated, via the touch-screen interface software, with at least one address for accessing the items of information in the database that is stored in the bulk memory belonging to the album cover whose image is displayed in the window that is touched by the user.
